

FOMENKO

$$15 + 2 + 12 + 5 + 12 = 46$$

08

①) echo hello > subor.txt. (ok)

2) ln subor.txt link1.txt (ok)

3) cat link1.txt (ok)
\$.. hello

4) ln link1.txt link2.txt (ok)

5) cat link2.txt (ok)
\$.. hello

6) ln -s subor.txt slink1.txt (ok)

7) ln -s link1.txt slink2.txt (ok)

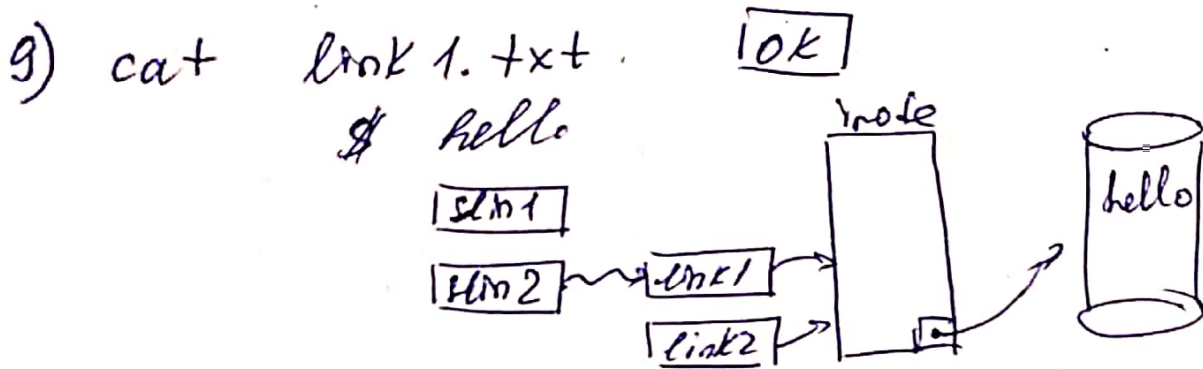

8) rm subor.txt. (ok)

9) cat link1.txt (error)

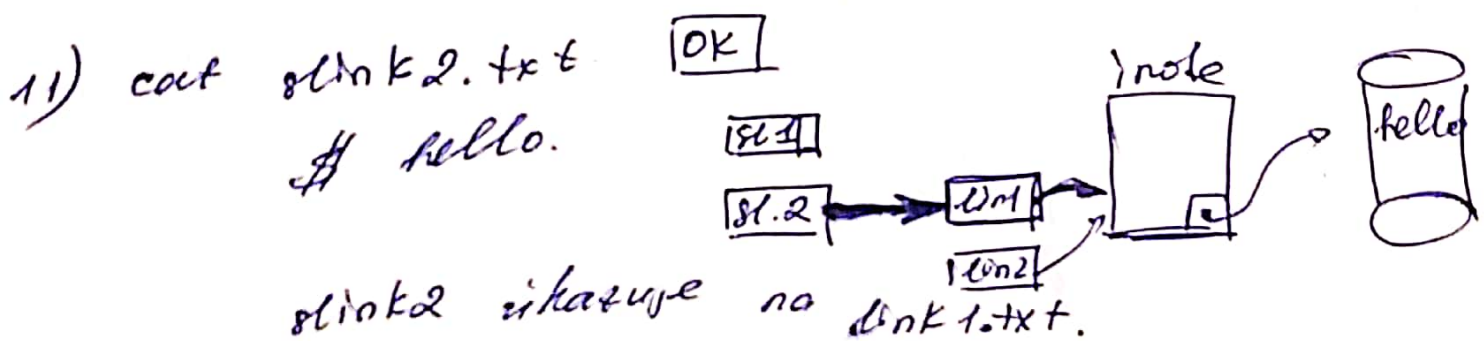

File does not exist,
error: link cannot be resolved to
existing file

~~9) cat link1.txt~~

10) cat slink1.txt error

// slink1.txt указывает на неexisting file

13) cat link2.txt OK

hello. // link2.txt существует и inode тоже существует и указывает на пространство дисков "hello".

15) cat slink2.txt mkdir dir OK

11.01.2021

16) `ln dir ldir` error

// první link nemí ukazovat na
direktory

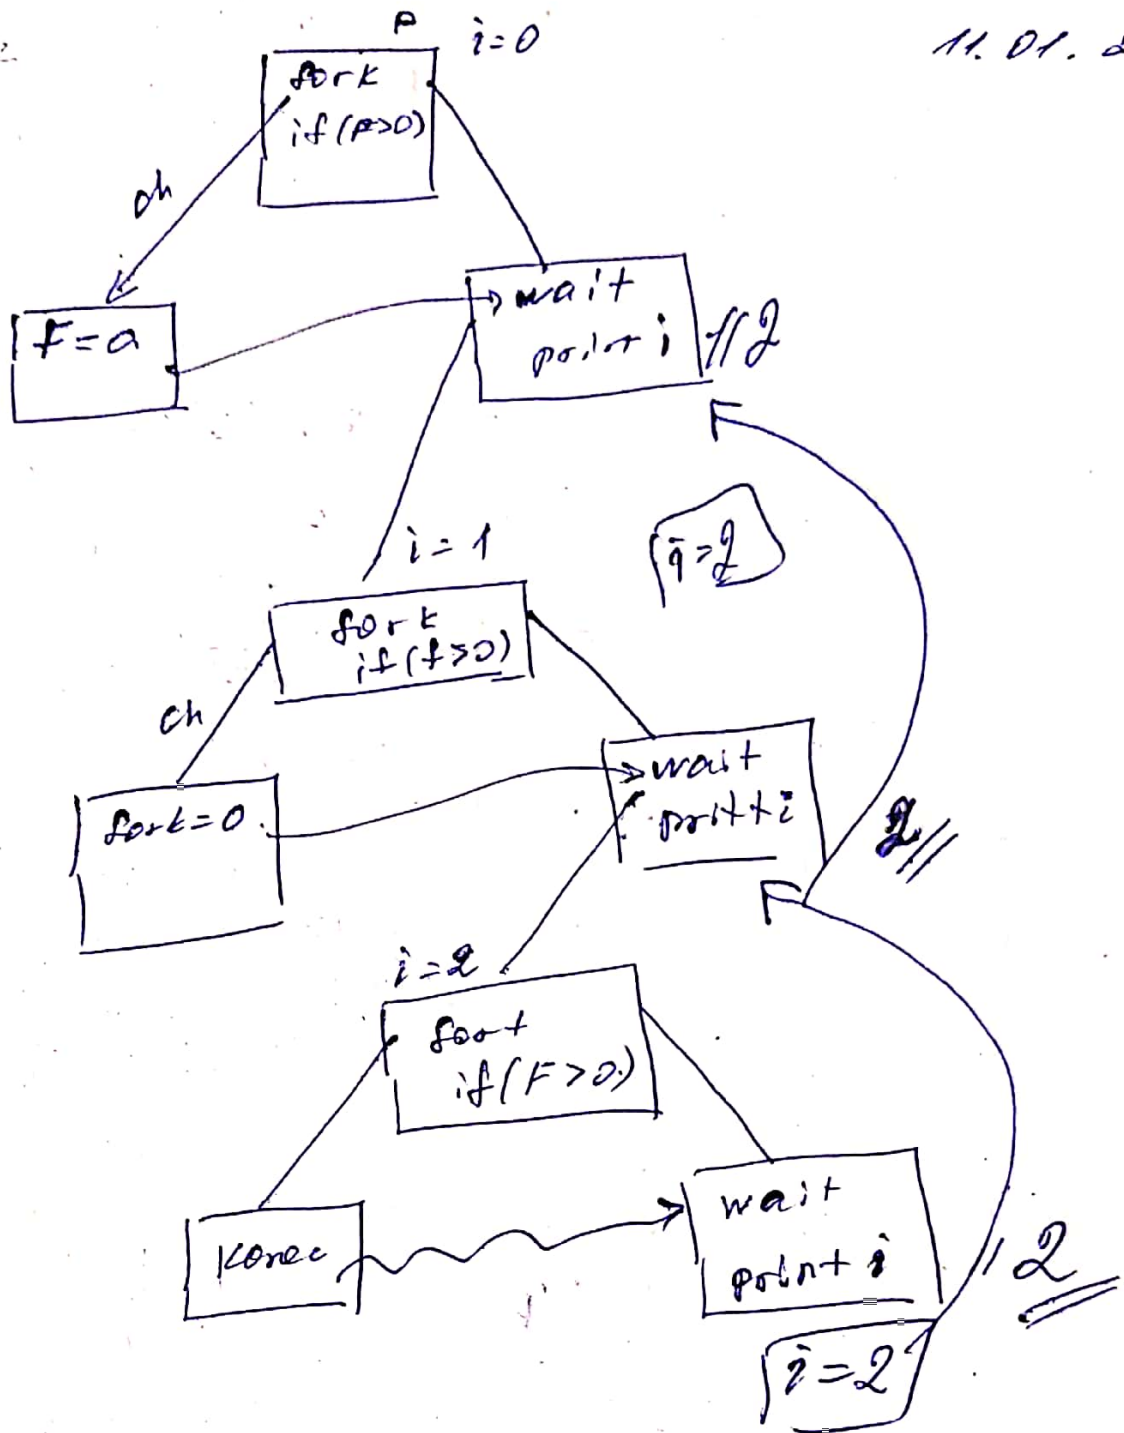

17) `ln -s dir sldir.` ok18) `ls ldir` error

link "directory" neexistuje.
na kroku 16 vytvořili sme první link
"ldir", a nemáme k tomu přístup.

19) `ls sldir` ok

✓ `sldir` → `dir` → ~~první~~ první soubor.

15

2, 2, 2. nie:

2

2, 1, 2, 0, 2, 1, 2

nemáme o tom správnom predstavení

③

a) grep 'baba' ✓

b) grep 'na' ✓

c) grep ~~na~~ 'a\$' ✓

d) grep -E '(a|b)' ✓

e) grep '[^a]' ✓

f) grep ~~^.*\$~~ ~~(.)*~~ ~~(.)*~~ '(.)^.*\$' ✓

~~^.*\$~~ ~~(.)*~~ ~~(.)*~~ ~~([()])*~~ ✓

g) grep '(.*).*\$' ✓

me - 36

12

11.01.2021.

4

#!/bin/bash

stlin ≠ argument.

if ["\$#" != 1]

then

echo zadajte jeden argument
exit 0

čo ide

fi

MENO = \$(cut -f 1 -d ;)
ZNAK = \$(cut -f 2 -d ;)
MAIL = \$(cut -f 3 -d ;)
KOMENT = \$(cut -f 4 -d ;)

na
stlin
tych
cutov?

~~echo \$(váša tážka)~~

echo \$(Pán/i \$MENO ^{znamka} váša \$ZNAK.
\$KOMENT.) | mail \$MAIL

↓ jeden z miera toho dobre

alebo

echo \$(Pán/i \$(cut -f 1 -d ;)) váša
znamka \$(cut -f 2 -d ;).
\$(cut -f 4 -d ;) | mail
\$(cut -f 3 -d ;)

5

nerozumiete tomu poriadne, ale čosi
viele

Fomenko Dmitry
11.01.2021

```
#!/usr/bin/env python3
def morse-code(s, d={})
    start = ord("A") // 65
    s-large = s.upper()
    for i in s-large
        if (i == 'L')
            s-code = s-code + 'L'
        else
            n = ord(i) - 65
            morze = morze-l[n].split()
            s-code = s-code + morze[1]
    return s-code
```

↑
↓
nie
indent

ok.

```
morse - #!/usr/bin/env python3
def morse-decode(s, d={})
    s-split = s.split("/")
    for i in s-split
        for j in i
            for k in morse-code
                if (j == k[2:])
                    s-decode = s-decode + k[1]
    return s-decode.
```

načo?

to je morosumne, prehladavat' to
pre kazde
pismo.

3b

mali sbe vytvorit
z slovniky
